

Projekt

Memorial bridge 2001
in Rijeka Croatia, AR+D winner 2002

Leistungen

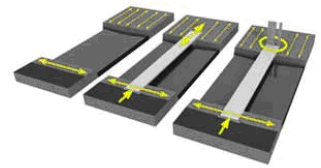

Tragwerksplanung, LPH 1-6

Architekt

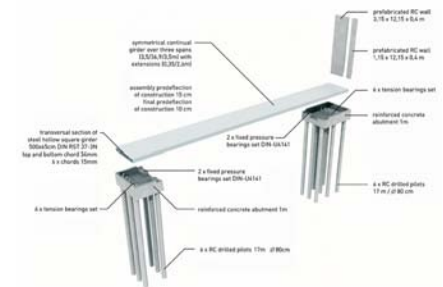

3LHD Architekten , Zagreb

Kurzbeschreibung
(englisch)

The basic concept is to give the utilitarian form a monumental character. The bridge starts from the Downtown, goes over the channel and ends on the other bank with a monumental vertical - accent. We would like to emphasize that the bridge is a monument so that in this sense we equate the walking surface of the bridge with the covering of the vertical accent. Definition of public space is achieved entirely through the build structure, which at the same time had to be recognized as a memorial building.

bridge = monument

Bridge measures
over-all length 47,0m, clear span 35,7m,
width 5,4m, construction thickness 65cm
verticals 9m
